

Build The Wind Towers Here!

We, the people, recognise the need for urgent action on promoting renewable energy sources such as wind towers. At the same time, promoting renewable energy sources opens opportunities for employment and building the manufacturing industry.

The current Federal Government has failed to create jobs and look after existing workers and their companies by allowing and promoting imports of steel and parts for wind tower construction.

This petition demands government;

- end the importation of wind tower parts;
- source steel from local/Australian producers and manufacturers for wind tower production;
- commit to innovation funding for local companies to build and construct future wind towers; and
- mandate that private companies involved in wind tower production do so only with locally sourced steel and parts
