

Earth Day at Trout Lake

April 20, 2024

- 12 bags of plastic bags and plastic film
- One bag of styrofoam packaging and takeout containers
- Several electric appliances
- Over 100 pounds of batteries

Of the nine green ideas, the very most popular idea was to have a permanent recycling station at the community centre. Of the other ideas, most were already being done (reusable shopping bags, recycling kitchen scraps, reusable thermos, reducing use of their car with active transportation) or could not be done because they were renting (programmable thermostat or heat pump).

It was very gratifying how many people in our community were working for a sustainable planet.
