

RETHINK BREAST CANCER & CANCERTAINTY COALITION APPLAUD THE ONTARIO NDP'S COMMITMENT TO CANCER PATIENTS

– The Ontario NDP platform includes a commitment to close the gap and fund take-home cancer drugs –

TORONTO, ONTARIO, APRIL 26, 2022 – Rethink Breast Cancer and the CanCertainty Coalition, the united voice of 30+ Canadian cancer organisations, applaud the Ontario NDP's inclusion of funding for take-home cancer drugs in their platform, as announced on Monday.

In the past, all cancer drugs were administered by IV in the hospital, which are fully funded in Ontario. But now, more than half of all prescribed cancer drugs are taken at home by pill or injection and under the current Ontario system, cancer patients younger than 65 face administrative challenges, stressful delays and expensive out-of-pocket costs when they try to access the take-home cancer drugs (THCD) their lives depend on.

“The past two decades have seen the introduction of new oral therapeutic options for cancer patients that improve survival and clinical outcomes across many disease sites. The cancer drugs taken at home do not require visits to the hospital for infusion and are often better tolerated,” said Robert Bick, co-chair of the CanCertainty Coalition. “The decision to address the inequities in accessing take-home cancer drugs will allow patients in Ontario to focus on their health and put the burden of funding and administration into the background.”

Ontario's system for take-home cancer drugs is a decade behind. The Western Provinces, Northern Territories and Quebec have all developed mechanisms to offer equal, faster, and more affordable access to THCDs alongside IV drugs. But by fixing this outdated model, Ontario will find cost-efficiencies and eliminate waste while making the process to order, approve and streamline THCD delivery.

“Throughout the pandemic, cancer screening, diagnoses and treatments have been delayed. And many more late-stage diagnoses are expected – cancer patients cannot afford any additional holdups to due bureaucracy or administration,” said MJ DeCoteau, executive director and founder of Rethink Breast Cancer. “This commitment to close the funding gap will help approximately 10,000 patients in Ontario get the treatment they need in a timely way each year.”

A recent Canadian-led study in the British Medical Journal found a four-week delay in cancer treatment increases the risk of death by about 10 per cent.ⁱ

The Evolution of Cancer Treatment

Traditionally all cancer treatments were administered to patients by an IV in the hospital. Over the past 15 years, an increasing number of effective cancer treatments can be taken at home by pill or injection. Take-home cancer medications are now a fundamental part of today's cancer treatments and should be recognized equally within our provincial health care systems. The majority of cancer patients today will require a take-home cancer drug.ⁱⁱ

Patients requiring an intravenous treatment can start that medication as soon as needed and don't face any financial or administrative burdens provided the drug is included on the provincial formulary.

However, when take-home cancer medications are prescribed, patients in Ontario who are younger than 65 must first exhaust their private pay options (if they have them). This can take weeks to a month for approval. (Between 17 – 30 per cent have no insurances and 33 – 40 per cent are underinsuredⁱⁱⁱ). Then, they must apply to the Ontario Trillium Drug Program – encountering more risky delays, taking on average another month for approval.^{iv} Finally the patient must pay the government an average \$4,000/year deductible while working on a reduced income during treatment.

Click the following names to watch these videos of patients struggling to access their cancer drugs:

- [Suzanne and Diane](#) both have metastatic breast cancer, but their treatments come in different forms (IV vs. pill). Diane had to jump through hoops and pay out of pocket to access treatment.
- [Rebecca](#) was diagnosed with the most aggressive brain cancer. The only treatment is in pill form, but it is not covered by Ontario's drug program because she is under 65.

About Rethink Breast Cancer

Rethink Breast Cancer is a Canadian charity known for making positive change and rethinking the status quo when it comes to breast cancer. Rethink educates, empowers and advocates for system changes to improve the experience and outcomes of those with breast cancer, focusing on historically underserved groups: people diagnosed at a younger age, those with metastatic breast cancer and people systemically marginalized due to race, income or other factors. We uplift, inspire and most importantly, rethink breast cancer to help people live better and live longer. www.RethinkBreastCancer.com

About the CanCertainty Coalition

The CanCertainty Coalition is the united voice of 30+ Canadian patient groups, cancer health charities, and caregiver organizations from across the country, joining together with oncologists and cancer care professionals to significantly improve the affordability and accessibility of take-home cancer treatments.
