

Help Improve HPV-Related Cancer Care for 2S/LGBTQIA+ Communities!

Join the Champion Network to Guide National HPV-Related Cancer Resource Development

The Community-Based Research Centre (CBRC) is launching a 2-year national project: **Confronting HPV-Related Cancer Care Challenges for 2S/LGBTQIA+ People**. This project addresses the barriers 2S/LGBTQIA+ communities face in accessing HPV-related cancer care. Through resource development and community engagement, the project aims to improve access to inclusive and affirming information, support, and care across Canada.

We're recruiting 2S/LGBTQIA+ community members for a Champion Network, who will provide input, share lived experiences, and help guide the development of culturally relevant resources. The Champion Network will meet virtually approximately every three months. For those who want to contribute but can't commit to ongoing meetings, we are also **seeking consultation participants to join a virtual consultation**. You will receive an honorarium for participation in either opportunity.

You're a great fit if you are:

- A 2S/LGBTQIA+ community member with experience of HPV-related cancer, whether through your own journey or by supporting a family member, friend or partner. HPV-related cancers include anal, cervical, oropharyngeal, vaginal, vulvar, or penile cancer.
- Located in Canada and able to communicate in English (all meetings will be held in English)
- Passionate about improving access, equity, and care for 2S/LGBTQIA+ communities

Why join the Champion Network (or the Consultation)?

Joining this work will give you the opportunity to:

- Share your experiences to shape national health resources
- Help develop community-led, culturally safe tools and education
- Support the spread of affirming, accessible information for others in your community
- Receive an honorarium for your time and contributions

Interested in joining the Champion Network or participating in a consultation?

Apply by October 6:
