

CODEPINK

The environmental movement and the peace movement share a target: militarism. The U.S. military has over 800 toxic bases around the world that act as launching pads for war, emitting billions of tons of carbon dioxide, making the U.S. military the largest institutional polluter in the world. War is driven by resource extraction; without it, resource extraction would not be possible. There's no way around it: in order to save the planet, we need to end war, imperialism, and U.S. militarism. We must break down the barriers between movements to meaningfully address the existential threat that war poses to the earth.

War Is Not Green

Fight for the People and the Planet!

War Is Not Green is bringing the climate justice movement and the anti-war movement into one. We can't save the planet without dismantling the war machine. Join our campaign!
