

# Canadian Parks, Recreation, and Sport Infrastructure Database

Provided by the Canadian Parks & Recreation Association and operated by ActiveXchange, this initiative is designed to centrally collate information about sport and recreation facilities across all local communities in Canada, including location, size, amenities and age. All users of this secure & sophisticated data network can use the Database to gain unique insights regarding facility infrastructure in their community.

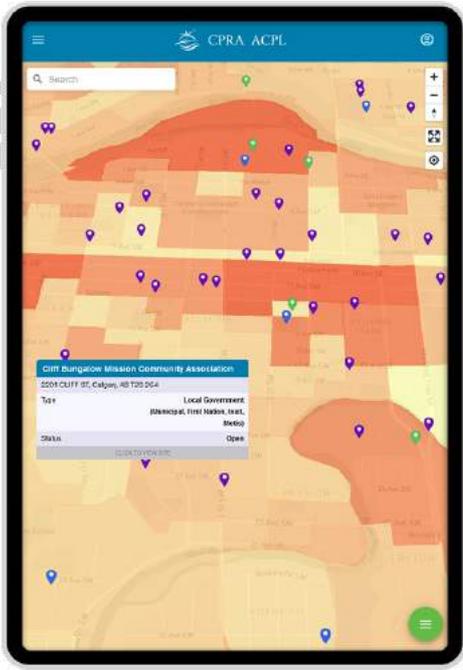

Canada's **ONLY** database devoted to parks, recreation, and sports facilities

The Database provides all stakeholders with a common and open data repository for adding, managing and accessing relevant non-commercially sensitive infrastructure information, saving time and costs on duplication of efforts throughout the sector.

It also provides access to localized demographic and community profile data, all delivered through an interactive mapping tool. An analysis dashboard with basic benchmarking is also included, which shows how infrastructure levels in each area align with the total population and how this compares with neighbouring municipalities.

Better **understand your local community** infrastructure with detailed information about sites, spaces and facilities.

**Target hotspot locations** using the overlay of the latest demographic, socio-economic, health & wellbeing data.

Add and manage relevant infrastructure information through our **open data repository**.

Use the Analytics Dashboard to gain a comprehensive overview of **infrastructure usage** and **potential demand** for any geographical region.

## FEATURES & DASHBOARDS

### Infrastructure & Site Information

Detailed information about sites, spaces, facilities, and their usages. Includes size, setting, surface types, amenities, and owner/operator information

### Community Profile Layers

View and analyze population demographics, and health & wellbeing profiles across neighbourhood, city, and provincial geographies

### Analytics Dashboards

Highlights nation-wide infrastructure and facility metrics with geographic level and facility type filtering for refined searching

### Movement Data Module

Provides a high-definition view of how, where, and when people move through a specific geography

Municipalities

Facility Operators

National & Provincial Sports

Not-for-profit Organizations
