

THE DIRTY DOZEN CAMPAIGN: WHO ARE AUSTRALIA'S DIRTY DOZEN POLLUTERS? It's time for Australia's Dirty Dozen polluters to do their fair share on climate

BACKGROUND:

After years of inaction from Coalition governments, the climate movement now has an opportunity to secure deep greenhouse emissions cuts from the country's biggest polluters.

The Albanese Government was elected with a mandate to strengthen Australia's Climate Safeguard Mechanism to ensure the industrial sector cuts its climate pollution this decade. It is a central plank of the government's efforts to tackle the climate crisis in this term of office.

The climate movement can't afford to miss this opportunity.

Communities across the country are already doing a heavy lift on climate. Households are installing rooftop solar at a world-leading pace and signing up to green electricity providers. People are cycling to work, shifting to public transport, as well as adopting Electric Vehicles.

The same can't be said of the facilities covered by Safeguard Mechanism whose emissions increased over the last decade. Industrial polluters are responsible for 28 percent of national emissions and it's time for them to pull their weight.

If the Dirty Dozen big polluters and the industrial sector refuse to do their fair share on climate, then a greater burden will be put on Australian households, farmers, small businesses, and other sectors of our economy.

The climate movement must act quickly to show the Albanese government that the community has skin in the game. We must take action to put the Dirty Dozen big polluters on the backfoot and inspire champions in the Labor government.

With your support, we can fight for a strong Climate Safeguard Mechanism that can help Australia beat its 2030 emissions reduction target and build momentum for ambitious actions that match the scale of the climate crisis.

WHO ARE THE DIRTY DOZEN (AND HOW TO REACH THEM)?

Dirty Dozen polluters are the usual suspects of big coal, oil, and gas companies. Together, these fossil fuel companies are responsible for around half of the emissions covered by Australia's Climate Safeguard Mechanism.

In the Dirty Dozen's corner, we have the likes of the Australian Petroleum Production & Exploration Association (APPEA) and Minerals Council of Australia (MCA). These industry lobby groups have a long track record of promoting the interests of fossil fuel companies.

It's up to the climate movement to shine a light on the Dirty Dozen and their enablers and demand that they deliver deep emissions cuts this decade.

NAME	LOCATIONS	TYPE	TOTAL EMISSIONS SINCE 2016	CHANGE SINCE SAFEGUARD MECHANISM INTRODUCED IN 2016
Chevron	Perth QV1 Building, 250 St. Georges Terrace Perth, WA 6000	Gas & Oil	52,293,584	+23%
