

The risk and consequences of nuclear deterrence failure can't be argued. By focusing on science and evidence-based policy decisions those working around the TPNW have challenged the false narrative of nuclear deterrence.

## EXPOSING THE SCAM OF DETERRENCE

## DEMOCRATISING THE DEBATE

The TPNW has broken the two-class system where nuclear-armed countries dictated the rules around who is considered relevant to discussions on nuclear weapons.

Through the TPNW there is a growing understanding that nuclear deterrence policies are a constant and critical threat to all countries.

## TPNW 5 YEARS

CHANGING   
NUCLEAR HISTORY

## ADVANCING NUCLEAR JUSTICE

One of the main drivers behind the TPNW was a shift in focus from nuclear weapons as mythical power constructs, to bombs that have been tested and used and which left an intergenerational legacy of harm.

Survivors are at the heart of nuclear weapon discussions, not just around the TPNW, but reaching into the nuclear Non Proliferation Treaty, the UN General Assembly, and even adding attention and support for national efforts to address the legacies of nuclear testing.

## ILLEGAL WEAPONS

The TPNW is the first globally applicable treaty that categorically prohibits nuclear weapons and puts in place a framework for verifiably and irreversibly eliminating them.

## TRILLIONS OUT OF THE INDUSTRY

The TPNW has prompted financial institutions to keep more than \$4.7 trillion out of the companies that manufacture and maintain nuclear weapons.
