

JAHN ELEMENTARY SCHOOL | SYLLABUS

“ We believe every childhood should involve the exploration of nature. Our programs share our love and curiosity for the environment with young people who will one day change the world. ”

- GREEN EXPLORERS CLUB

About Us

Green Explorers Club uses life science concepts and hands-on projects to help kids learn about nature and sustainability. We created Green Explorers Club to help kids investigate nature and sustainability in a fun way -- so that as they grow into future engineers, farmers, clothing designers, presidents, or whatever they want to be, they will have the basic tools they need to incorporate sustainability practices into their initiatives.

Topics This Term

JAN 11/18 - Intro to Sustainability
