

## Dairy Compliance Scorecards

The idea of these scorecards is to print them out on cardstock and carry in your coverall pocket during farm visits to provide an easy and consistent way to keep a pulse on protocol compliance with real-time data. Ideally, the vet will train area leads (parlor, maternity, calf etc.) to use these scorecards weekly and they can then compile the data for the vet's visit. An essential part of this working is that feedback be provided to the team responsible for the tasks! The KPI data should be shared with the team in a visible form (like we share SCC or milk production data on a graph in farm offices) to keep everyone informed and motivated.
