

MINING AND ENERGY POLICY

WHAT WE BELIEVE

Australia is a nation rich in natural resources and energy—and our prosperity has been built by Australians who have worked hard, innovated, and unlocked that potential. From iron ore and gas to uranium and critical minerals, these assets are the backbone of our economy, our security, and our place in the world.

We believe Australia must stop underselling itself. For too long, governments have failed to seize the full value of our natural advantage, leaving our nation lagging where we should be leading.

We believe in responsible resource development that works hand-in-hand with our agricultural sector—not against it. Protecting prime farmland and vital water resources is non-negotiable, and balance must be restored between farming and extraction.

We believe Australia's energy system is broken. Families and businesses are paying too much for power that is too unreliable. This must change.

We support decisive action to restore energy self-sufficiency, drive down costs, and guarantee reliable supply. While renewable energy has a role, it cannot come at the expense of affordability or reliability. Australians should not be forced to pay more for power that doesn't deliver when it's needed.

We believe in practical, no-nonsense energy policy—focused on results, not ideology—and in using Australia's natural strengths to secure our economic future.

OUR POLICIES

Australia has for too long discouraged longer-term exploration and development of our natural resources, bowing to the Green agenda - policy decisions increasing cost and reducing reliability

This policy reverses this decline.

Lower Power Prices, Reliable Energy

Deliver dependable baseload power. Cut energy costs for households and businesses Restore Australia's energy self-sufficiency.

A Balanced Energy Mix

Back coal, gas, nuclear and emerging technologies. End market-distorting subsidies. Only support energy that improves reliability and lowers costs

Unlock Our Resources

Fast-track critical mineral and resource projects. Strengthen Australia's position in global markets. Boost local processing and value-adding

Protect Farmers and Water

Safeguard prime agricultural land. Guarantee water security. Enforce fair coexistence between farming and mining.

Stronger Leadership

Deliver a clear national energy and resources strategy. Stop missed opportunities and weak global positioning. Make Australia a leading, reliable energy exporter
