

Monarch Butterfly Life Cycle Flip Book

Monarch Butterfly Life Cycle Flip Book

Wild Thing Education Program

www.SSTT.ca

Make a Flip Book.

Learn about the Life Cycle of Butterflies.

A flip book uses a series of images to simulate or animate action. In this flip book a Monarch butterfly egg transforms into an adult through 4 distinct stages. This process is called complete metamorphosis. Watch each stage; egg, caterpillar, chrysalis and adult, unfold in your own flip book.

Assembly Instructions

1. Print and carefully cut out each numbered page of the flipbook – 11 pages and an unnumbered cover page.
2. Stack the pages in reverse number order, 11, 10, 9, 8, and so on, ending with the cover page.
3. Square up the stack, lining up the short edge closest to the page numbers. This edge will become the spine of your flip book. Note, each page is slightly longer than the previous page to facilitate flipping.
4. Attach the pages along the spine edge with 2 or 3 staples or a bulldog clip.

5. Hold the spine in your left hand and flip the pages with your right thumb and index finger.
