

Threatened Plants

TASMANIA

Strategic Plan 2026-2031

April 2026

About this Plan

This plan sets the direction and strategic actions for the volunteer group, Threatened Plants Tasmania Inc. (TPT) up to 2031. It explains the Committee's intent to our members, partners, and supporters.

This document was prepared by the TPT Committee after a planning session in April 2026.

Background

Tasmania is home to a multitude of unique and fragile plant species. Of the 718 species listed as under threat in Tasmania (Tasmanian Species Protection Act), 68% are flora. Nearly a third of these species are endemic to our island state – found nowhere else in the world. They can be charismatic and colourful; small and drab; long-lived or ephemeral; only appearing briefly after rain or fire. Some are threatened due to habitat clearance and fragmentation, others we lack knowledge of their distribution.

Threatened Plants Tasmania Inc. (TPT) became an Incorporated Association and registered charity in 2021, but has been a volunteer group actively involved in the conservation and monitoring of Tasmania's threatened plants since 1998. Threatened Plants Tasmania members undertake field trips to survey, monitor and manage threatened plants throughout Tasmania. These field trips are coordinated by the TPT committee and TPT's partners.

TPT members have participated in recovery actions for some of the most critically endangered species in Tasmania over many years. We have also undertaken targeted extension surveys for many other rare and poorly documented species.

Governed by our Constitution, TPT is led by a volunteer Committee. Administration and activities of the Association are resourced through membership fees and grants.

Threatened Plants Tasmania is a member of Landcare Tasmania and Wildcare Tasmania.

Our Vision

For Tasmania's unique and threatened flora to be preserved for future generations.

Our Purpose

Our purpose is to conserve, learn and share knowledge about Tasmanian threatened plants by:

- Undertaking on ground recovery actions for priority species;
- Conducting surveys and monitoring to improve our knowledge;
- Sharing our love and passion for plants;
- Collaborating with others to achieve our conservation objectives; and
- Learning through sharing our collective knowledge;

Strategies & Actions

Strategy	Actions
Undertaking on ground recovery actions for priority species	In conjunction with our partners, coordinate volunteer field trips for weeding, caging, seed collection, translocations, and other recovery actions for priority species.
Conducting surveys and monitoring to improve our knowledge;	In conjunction with our partners, coordinate volunteer field trips for population/extension/monitoring surveys to gather data for priority threatened species.
Sharing our love and passion for plants;	Create opportunities during field trips and workshops to share our love and passion for plants.
Collaborating with others to achieve our conservation objectives	Maintain regular communication with our partner organisations. Provide letters of support for collaborative funding applications with partners. Apply for grants within our means to administrate. Contribute to relevant strategy development as opportunities arise. Participate in Plant Conservation Group meetings and other relevant Steering Committees as opportunities arise.
Learning through sharing our collective knowledge	Organise training events and workshops or other learning opportunities for members and the broader community on botanical topics informed by member feedback. Provide communications for members and the broader community, for example through a yearly newsletter.
